

HY Kit

Custom made solutions: for a personalized structure, the first step is the Starter-Kit. The Starter-Kit consists of legs, spikes and discs. One must add the shelf, which can be purchased separately. The clearance between the shelves vary between 165mm and 305mm, at 20cm increments. This solution accommodates a minimalist system consisting of a source and an integrated amplifier. With the expansion of the music system, it is also possible to enlarge the structure that supports it. It needs the simple addition of one or more Add-Kits, between 145mm and 265mm in height between the two existing shelves. The finish of the shelves is only available in matt black.

HY STARTER-KIT

- ① 4 Discs
- ② 4 adjustable termination
